

Smart Contract State:  $c_1, c_2, \lambda_1, \lambda_2 \in \mathbb{Z}$

1) Constructor( $\lambda_1, \lambda_2$ ) :

Store input values  $\lambda_1, \lambda_2$  to the corresponding state variables

$c_1 \leftarrow \text{InitAcc}(\lambda_1)$

$c_2 \leftarrow \text{InitAcc}(\lambda_2)$

2) Register( $id, pk, W_2, c_{add1}, W_{add1}, c_{add2}, W_{add2}$ ) :

if  $\text{sizeof}(id) \neq \lambda_2 \vee \text{CheckUpdate}(c_2, c_{add2}, W_{add2}, id) = 0 \vee \text{sizeof}(id, pk) \neq \lambda_1 \vee \text{CheckUpdate}(c_1, c_{add1}, W_{add1}, (id, pk)) = 0 \vee \text{VerifyNonMem}(c_2, W_2, id) = 0$   
return fail

endif

$c_1 \leftarrow c_{add1}$

$c_2 \leftarrow c_{add2}$

3) Revoke( $id, pk, W_1, \sigma_{sk}(pk), c_{del1}, W_{del1}, c_{del2}, W_{del2}$ ) :

if  $\text{sizeof}(id) \neq \lambda_2 \vee \text{sizeof}(id, pk) \neq \lambda_1 \vee \text{VerifyMem}(c_1, W_1, (id, pk)) = 0 \vee \text{VerifySig}(\sigma_{sk}(pk), pk) = 0 \vee \text{CheckUpdate}(c_1, c_{del1}, W_{del1}, (id, pk)) = 0 \vee \text{CheckUpdate}(c_2, c_{del2}, W_{del2}, id) = 0$   
return fail

endif

$c_1 \leftarrow c_{del1}$

$c_2 \leftarrow c_{del2}$

4) RetrieveState() :

return ( $c_1, c_2, \lambda_1, \lambda_2$ )
